POLREP NO.: Five (5)
INCIDENT NAME: Duane Marine
SITE/SPILL NO.: 20
POLLUTANT: Contaminated Oil, Drums, and Tanks
CLASSIFICATION: Potential Major
SOURCE: Duane Marine, 26 Washington Street,
Perth Amboy, New Jersey
WATER BODY: Arthur Kill

1. SITUATION:

A. EPA conducted an inspection on November 6, 1984 to monitor security measures and site conditions. A few of the plywood window coverings have again been removed from the main building area. In addition, previous fence repair efforts at the northeastern corner of the site have been destroyed. The fence framework and barbed wire have been dismantled, permitting continual access to the property.

B. A 5,000 gallon tanker located just outside the concrete wall dike, was leaking aqueous material from the valve stem at a rate of approximately one-half (0.5) gallons per minute.

2. ACTION TAKEN:

A. EPA inserted a galvanized steel fitting into the tanker valve stem to plug the leak.

3. FUTURE PLANS AND RECOMMENDATIONS:

A. EPA will conduct regular inspections to monitor site conditions.
